

David Rogers

Chief Development Officer, DEKA Research

David Rogers is the Chief Development Officer at DEKA Research, and currently leads the industry consortia developing the experiential robotics platform. He began his career in the United States Air Force, lived and worked in East Africa where he founded a high school in South Sudan. He earned a PhD at the Institute for Simulation and Training developing software platforms for the Department of Defense, founding Allogy and launching Deployed Medicine, the world's leading resource for battlefield medicine. David served as a White House Fellow in Office of American Innovation, leading a national initiative to modernize workforce data, and then joined DEKA and the Advanced Regenerative Manufacturing Institute where he works to advance the development and adoption of new technologies.
